Misinformation: 2018 Mayotte: An Earthquake Sequence in a Poorly Instrumented Region

- **Many felt earthquakes that cannot be located**
- **Rumours, fake news and conspiracy theories**

Explain Why Information Is Missing!

Disinformation: Not New!

The 1887 quake in Menton?

No! 1873 EQ, Belluno, Venetia, Italy

(courtesy A. Laurenti)

Earthquake Prediction: 2019 Albania, People Leaving Tirana!

 **EMSC**  @LastQuake · 22 sept.

To our friends in #Albania, you are likely to have heard or to hear in the coming days people claiming to have predicted yesterday's earthquake or future ones. Do not listen to them: Earthquake prediction DOES NOT exist as today. Stay safe

Debunking, Pre-bunking Misinformation

EMSC
@LastQuake

"Earthquakes do their best to be as unpredictable as possible" - Watch this video from @geosociety where seismologist Ross Stein explains why #earthquakes cannot be predicted at present 🖱️

@LastQuake

? Do you have an #earthquake prediction? The Collaboratory for the Study of #Earthquake Predictability(scec.org/research/proje...) accepts predictions & evaluates them. Careful though: saying you did predict after the #earthquake happens means nothing 😊

Eyewitnesses hold the Key for Rapid Earthquake Impact Assessment

- Eyewitnesses hold the data and the tools exist to collect it (social media, websites, messaging apps...)
- Understand & satisfy their evolving needs and habits in return for this data
- No single tool can do it all: crowdsourcing, social media harvesting, AI, statistics...
- Beyond impact: engage with eyewitnesses to improve awareness and preparedness
- LastQuake data included in ARISTOTLE's impact assessments to the ERCC (ECPU)

Thank you for your attention!
